## MOOC Assessment in the Age of AI

© European Union 2023 - P1ai / Adobe Stock

This course recognizes the potential challenges and opportunities that teachers may face with the rise of generative AI and its impact on the development and delivery of student assessments. By providing insights, examples, and discussions, this course empowers teachers to optimize the assessment process, enhance student learning outcomes, and navigate the intersection of assessment and AI in education responsibly and effectively. It focuses on tackling issues such as bias and fairness, privacy and data security, automated feedback, validity and reliability of AI-based assessments.

### Learning objectives:

- Explore formative assessment strategies with AI, engaging in discussions and best practices;
- Address challenges and opportunities in summative assessment with AI, discussing various practices;
- Enhance student learning with AI by integrating technology through interactive activities, practical exercises, and real-world examples.

### Key information:

- Start date: 6 November
- End date: 13 December
- Estimated workload: around 4 hours per week
- Duration: 5.5 weeks
- Language: English
- Target audience: any practising teachers from all types of schools with all levels of experience, and student teachers
